PROFESSIONAL SUMMARY

I'm studying Intelligent Systems at the Technical University of Košice, with a deep passion for the places where AI meets the real world - drones that recognize handwriting, solvers that think step-by-step, embedded systems that blink in perfect timing. My work spans neural networks, computer vision, embedded systems, and front-end development. I enjoy building things end-to-end: from training a model to shipping a clean UI that makes it usable. I'm a fast learner, comfortable in both Python and C# environments, and I thrive in collaborative teams where experimentation is encouraged.

PROJECT EXPERIENCE

AI Drone Handwriting Mimic System

- Designed a system where a drone recognizes handwritten or screen-displayed digits and mimics them mid-air using movement patterns.
- Combined computer vision and drone control systems using Python and OpenCV.
- **Technologies:** Python, OpenCV, TensorFlow, UAV SDK

Traffic Light Simulation with Arduino

- Built a programmable traffic light system using Arduino with multiple blinking conditions.
- Implemented timing logic and LED patterns simulating real-world scenarios.
- **Technologies:** Arduino, C++, Breadboard, LEDs

2D Platformer Game - Exam Project

- Created a simple 2D game in C# as part of a final exam project.
- Implemented basic physics, movement mechanics, and interactive elements.
- **Technologies:** C#, Unity

AI-Based Sudoku Solver

- Developed an automated solver for Sudoku puzzles using backtracking and heuristics.
- Created a GUI for user input and visualization of solving steps.
- **Technologies:** Python, Tkinter

Command Line Task Manager

- Created a lightweight terminal-based task manager for organizing daily to-dos.
- Implemented task categories, deadlines, completion status, and file persistence.
- **Technologies:** Python, argparse, JSON

EDUCATION

Bachelor's Degree in Intelligent Systems

Technical University of Košice (TUKE), Slovakia 2021 - Present

- Developing a final thesis on neural networks and visual data recognition.
- Coursework covers Machine Learning, Neural Networks, Algorithms, Web Development, and Data Structures.
- Participating in collaborative university projects and tech competitions.

Software Development

Computer Academy STEP, Mykolaiv, Ukraine 2018 - 2020

- Studied programming fundamentals, software development, and computer science basics.

TECHNICAL SKILLS

Programming:	Python, C#, C, HTML5, CSS3, JS, C++
AI & Vision:	TensorFlow, OpenCV, Neural Networks, Computer Vision, Data Analysis
Web:	Front-End Development, WordPress
OS & Tools:	Linux, Windows, Adobe Photoshop, LaTeX, MS Office
Other:	Embedded Systems, Game Development, Problem Solving

LANGUAGES

Ukrainian:	Native (C2)
Russian:	Native (C2)
Slovak:	Intermediate (B1)
English:	Upper Intermediate (B2)
