PROFESSIONAL SUMMARY

I'm studying Intelligent Systems at the Technical University of Košice, with a deep passion for the places where AI meets the real world - drones that recognize handwriting, solvers that think step-by-step, embedded systems that blink in perfect timing. My work spans neural networks, computer vision, embedded systems, and front-end development. I enjoy building things end-to-end: from training a model to shipping a clean UI that makes it usable. I'm a fast learner, comfortable in both Python and C# environments, and I thrive in collaborative teams where experimentation is encouraged.

PROJECT EXPERIENCE

GitHub Activity Visualizer

- Built a front-end dashboard for visualising any GitHub profile - contribution heatmap, language breakdown, top repositories, live stats, and a side-by-side comparison mode.
- Routed GitHub API calls through a Cloudflare Worker proxy with Workers KV caching to keep the access token off the client and stay within rate limits.
- **Technologies:** TypeScript, D3.js, Vite, GitHub REST API, Cloudflare Workers

RAG Chatbot

- Built a document Q&A chatbot with a custom React and FastAPI stack - answers are grounded strictly in uploaded documents, with source citations.
- Combined vector and keyword search with cross-encoder re-ranking, and packaged local embeddings plus a free Groq-hosted LLM into a single Docker container.
- **Technologies:** Python, LangChain, ChromaDB, FastAPI, React, Docker

Markdown Previewer

- Developed a split-view Markdown editor with live preview, syntax highlighting for 100+ languages, Vim keybindings, and KaTeX math rendering.
- Shipped a companion CLI that opens any local .md file or directory in the browser with live reload on save.
- **Technologies:** TypeScript, Vite, marked.js, highlight.js

Calendar

- Built a privacy-first, open-source calendar that runs entirely in the browser - no accounts, no server, no telemetry - with month, week, day, agenda, and year views.
- Implemented recurring events with RRULE support, drag-and-drop rescheduling, natural language input, and a native desktop app via Tauri.
- **Technologies:** TypeScript, React, Vite, Tauri, Dexie.js, Tailwind CSS

Spotify Stats CLI

- Created a command-line tool that authorizes with Spotify via OAuth and surfaces top tracks and artists over the last month, six months, or all time.
- Rendered results as colorized terminal tables or as a styled, shareable HTML report.
- **Technologies:** Python, Spotify, Jinja2, Rich, argparse

EDUCATION

Bachelor's Degree in Intelligent Systems

Technical University of Košice (TUCE), Slovakia 2021 - Present

- Developing a final thesis on neural networks and visual data recognition.
- Coursework covers Machine Learning, Neural Networks, Algorithms, Web Development, and Data Structures.
- Participating in collaborative university projects and tech competitions.

Software Development

Computer Academy STEP, Mykolaiv, Ukraine 2018 - 2020

- Studied programming fundamentals, software development, and computer science basics.

TECHNICAL SKILLS

Programming:	Python, C#, C, TypeScript, HTML5, CSS3, JS, C++
AI & Vision:	TensorFlow, OpenCV, LangChain, Neural Networks, Computer Vision, Data Analysis
Web:	React, FastAPI, Front-End Development, WordPress
OS & Tools:	Linux, Windows, Docker, Cloudflare Workers, Adobe Photoshop, LaTeX, MS Office
Other:	Embedded Systems, Game Development, Problem Solving

LANGUAGES

Ukrainian:	Native (C2)
Russian:	Native (C2)
Slovak:	Intermediate (B1)
English:	Upper Intermediate (B2)
